Subject: Comment on document ISRP 2007-9

Dear Patty,

A quick comment in support of proposal 200752400 which establishes a non-lethal approach to deter sea lions from excessive preying on migrating salmon. Their approach has a proven track record in other applications in the US. In addition, they are taking an additional step to only energize the low voltage DC field when the sea lion signature is present.

I am totally against shooting protected sea lions. Once the non-lethal deterrents are in place, I would like to see the upstream sea lions safely moved to a downstream location below the electrical array.

Thank you for your consideration.

Sincerely,

Chris Chapman
