MEMORANDUM

TO: Council Members

FROM: Tony Grover and Leslie Bach

SUBJECT: Staff recommendation to use Council funds to develop a pilot toxic contaminants story map using Polycyclic Aromatic Hydrocarbon (PAH) data

BACKGROUND:

Presenters: Tony Grover and Leslie Bach

Summary: Council staff have been hosting a regional workgroup focused on demonstrating tools for identifying and displaying toxic contaminant issues in the Columbia River Basin. The basis for the group is to raise awareness of the issue of toxic contaminant impacts on native fish and wildlife. The workgroup has focused on Polycyclic Aromatic Hydrocarbons (PAH) as a pilot mapping exercise, and is ready to produce the map products.

Proposed Action:

Council staff request that the Council approve an expenditure of funds for development of a pilot story PAH map. Staff will work with the members of the Toxics Workgroup and QW Consulting to produce a pilot demonstration map of PAH compounds with the same look and feel as other [maps](#) for objectives, screens and hatcheries.

Budgetary Impacts:

Council funds not to exceed \$30,000.

Relevance: The Fish and Wildlife Program Water Quality sub-strategy includes a provision for the Council to "...assist regional parties in advancing public education and information on toxics issues" (page 55, Water Quality Strategy). The emerging program priorities section calls for the Council to preserve program effectiveness by supporting "mapping and determining hotspots for toxic contaminants" (page 116, Investment Strategy – Emerging Program Priorities).

Background: Council staff have been hosting a regional toxic contaminants workgroup consisting of staff from NOAA, CRITFC, Washington Ecology, ODEQ, LCEP, UCUTs, Yakama Nation, USGS, EPA and others. The basis for the group is to raise awareness of the issue of toxic contaminant impacts on Columbia Basin fish and wildlife. The workgroup is focusing on developing mapping products that will provide education on toxic contaminant issues across a broad spectrum of audiences. The group has selected Polycyclic Aromatic Hydrocarbons (PAHs) as the pilot for a toxic contaminant map and public education tool for the Basin. PAHs are known to cause adverse effects on salmon and steelhead, and they are widespread and ubiquitous in the Basin. The workgroup has compiled all readily available data on PAHs in the Basin, and has organized those data into a standard template. The data and the group are now ready to produce the map products and demonstrate tools for identifying and displaying toxic contaminant issues in the Basin.
