Dear Mr. Wright,

After attending the B.P.A. hearing in Seattle, I am concerned that your proposal to allocate 100 MW of power to each aluminum plant will put me out of work. What good would 100 MW do for any aluminum plant? I don't understand why the aluminum plants are being cut off. Since the Columbia river dams were built to power aluminum plants and irrigate eastern Washington.

I hope you will consider supporting some long term power contracts for northwest smelters

Thank you,

Steve Leach
