Subject: energy comments

Mr. Wright,

I just wanted to encourage you to accept the "Public Interest Proposal" for determining the energy future for the Northwest. Bonneville Power is already the largest "Renewable" generator for our state, and as water resources become arguably more unstable it only makes sense that you would expand heavily into wind, solar, and conservation technologies.

We know from our clientele that the local interest in there. Now we need the leadership from larger corporations to take the next step toward global responsibility.

Thank you for recording our comments.
