Subject: clean energy and wild salmon

BPA--

I know that you are in the midst of a lengthy process to decision-making about the future power operations in the northwest. I am in favopr of breaching the four lower Snake River dams and replacing the electricity production lost with initiatives in energy conservation and wind power.

Most of all I hope that you will work with all diligence for the development of clean energy and the return to health and preservation of wild salmon.

Thank you,  
The Rev. W. Thomas Soeldner
